JavaScript String replace() Method

[< Previous](#)[JavaScript String Reference](#)[Next >](#)

Example

Return a string where "Microsoft" is replaced with "W3Schools":

```
var str = "Visit Microsoft!";  
var res = str.replace("Microsoft", "W3Schools");
```

[Try it Yourself »](#)

More "Try it Yourself" examples below.

The `replace()` method searches a string for a specified value, or a *regular expression*, and returns a new string where the specified values are replaced.

Note: If you are replacing a value (and not a *regular expression*), only the first instance of the value will be replaced. To replace all occurrences of a specified value, use the global (g) modifier (see "More Examples" below).

Read more about regular expressions in our [RegExp Tutorial](#) and our [RegExp Object Reference](#).

This method does not change the original string.

Browser Support

Method					
<code>replace()</code>	Yes	Yes	Yes	Yes	Yes

Syntax

```
string.replace(searchvalue, newvalue)
```

Parameter Values

Parameter	Description
<i>searchvalue</i>	Required. The value, or regular expression, that will be replaced by the new value

Technical Details

Return Value:	A new String, where the specified value(s) has been replaced by the new value
JavaScript Version:	ECMAScript 1

More Examples

Example

Perform a **global** replacement:

```
var str = "Mr Blue has a blue house and a blue car";  
var res = str.replace(/blue/g, "red");
```

[Try it Yourself »](#)

Example

Perform a global, **case-insensitive** replacement:

```
var res = str.replace(/blue/gi, 'red');
```

[Try it Yourself »](#)

Example

Using a **function** to return the replacement text:

```
var str = "Mr Blue has a blue house and a blue car";  
var res = str.replace(/blue|house|car/gi, function (x) {  
    return x.toUpperCase();  
});
```
